Date	Time	Cooler Thermometer Temperature	Calibrated Thermometer Temperature	Calibrated Thermometer Number	Initials	Method of Calibration	Corrective Action Taken	Reviewed by & Date

Thermometer calibration should be conducted bi-annually at minimum. The procedure to calibrate the thermometers is as follows, place the thermometer in ice slush and let it sit for one to two minutes. **Do not allow thermometer to touch side or bottom of container.** Observe the temperature while in ice-slush, which should read 32° F or 0° C, if different adjust the thermometer. Measure the temperatures in the cooler using the calibrated thermometer and the thermometer normally used to monitor daily cooler temperatures. Record any difference under corrective action.
