   lost and our best wishes to everybody involved in that tragedy.
                                                                                        DR. ASPER: Any questions for Rusty? Okay.
   Thank you.
                                                                       6
                                                                                        MR. PITTMAN: Thank you.
 7
                  We've got two more here, one from Mark Stewart
                                                                                        DR, ASPER: We'll move on to fisheries. Dale
   and one from Catfish.
                                                                       8 Diaz.
                  Would you rather talk now or after the shrimp
                                                                       9 G. Marine Fisheries
10 report?
                                                                                        MR. DIAZ: Good morning, Dr. Asper,
11
                  MR. MILLER: It doesn't matter. Whatever y'all
                                                                      11 commissioners, Ms. Chesnut, Chief Chatagnier.
   want to do, sir. If y'all want us to step aboard, we'll step
                                                                                        I wanted to mention just a couple of things
   aboard and talk to you. We ain't got no problems.
13
                                                                      13 before I start calling the staff up.
14
                  If you want to go with the shrimp report first,
                                                                                        One is I want to recognize the shrimp and crab
   Stewart said, go ahead.
15
                                                                      15 bureau, Traci and her staff. They worked really hard putting
16
                  DR. ASPER: Would you rather do that?
                                                                      16 together a Shrimping the Sound newsletter that was sent out in
                  MR. MILLER: Yes, sir.
17
                                                                      17 y'all's mailout.
                  DR. ASPER: Fine. We'll bring you back up after
18
                                                                                        This is something that we send out to everybody
   that, that way you can go --
                                                                      19 that purchased a commercial shrimp license prior to shrimp
19
20
                  MR. MILLER: Thanks.
                                                                      20 season. And it's our effort to try to communicate better with
                  DR. ASPER: Because some of your questions may
                                                                         people in the shrimp industry.
21
22 be answered in that report.
                                                                                        I know Commissioner Bosarge had asked us a
23
                  MR. MILLER: It truly might be, because that's
                                                                      23 couple of years ago to try to do some extra efforts to relay
   why some of us are here.
                                                                      24 information to the shrimp fishery, and this is one of the
                  MR. CHATAGNIER: All right. Executive
25
                                                                      25 things we're doing. We plan on continuing that.
                                                              5
                                                                                                                                    7
 1 director's report.
                                                                                        And thank you, Traci, and shrimp and crab staff
        Executive Director's Report
                                                                       2 for your hard work.
                  MR. CHATAGNIER: Everything looks good.
 3
                                                                                        MR. BOSARGE: Thank you, Traci. It's good
 4
   F.
       Marine Patrol
                                                                       4 information and I read it cover to cover, and I'm sure most
 5
        2. Marine Patrol Report
                                                                       5 people do. Thank you.
                  DR. ASPER: Marine patrol.
 6
                                                                                        MR. DIAZ: And we'll keep that up
                  MR. PITTMAN: Good morning, Mr. Chairman,
                                                                                        I also wanted to mention that we've been
   commissioners, Colonel Chatagnier, Sandy.
                                                                       8 working, the fisheries staff has been working with the legal
 9
                  You have a report in in front of you.
                                                                       9 team and marine patrol to develop a draft crab trip ticket form
                  You'll notice our saltwater fishing license
                                                                      10 and a draft crab ticket manual.
10
11 citations went down from the month before. We did have an
                                                                                        We have been developing this over the course of
   increase in our boat and water safety violations. Got a few
                                                                      12 the last month or so. And we plan on having these things in a
   without the life jackets, PFDs, and several children under 12,
                                                                      13 pretty good draft form here in the next couple of days. And
   12 and under, without life jackets on, and several reckless
                                                                      14 we're going to have a couple opportunities for folks in the
   operation, negligent operation citations, mostly no-wake zone
                                                                      15 crab industry to come in and give input.
16 violations.
                                                                                        First, we're going to have a crab task force
17
                  We had one boat and water safety class,
                                                                      17 meeting on July 7 at 3:00 p.m. for the crab task force, and
18 certified 15 students.
                                                                      18 we're going to show them the draft ticket and the draft manual
                  And the boating accident in May that Rick just
19
                                                                      19 and get some comment and input from them.
20 talked about with the SANDY POINT and three fatalities.
                                                                                        And after that, we're going to have a meeting on
                  We did have all of our dive team out there for
21
                                                                      21 July 12 at 4:00 p.m. for crab fishermen and crab processors so
   two days searching. And one of our divers did get in harm's
                                                                      22 they can have a chance to give us some input on those forms,
   way when he got entangled in a net, and that's when we called
                                                                      23 also.
   off dive operations until the salvage crew got there.
                                                                                        So we'll be seeking some input. And we'll
25
                  Special events, we had six. Presentations and
                                                                      25 report back to you next month. And we will be ready to bring
```

11

1 is Lake Pontchartrain. Here is the Mississippi Gulf Coast, and

```
2 the Bonnet Carre Spillway goes right into Lake Pontchartrain.
2 couple of months ago.
                                                                                        We were able to go over to the Bonnet Carre and
                  With that, first up for marine fisheries is
                                                                       4 actually see the structure. In my entire career, I've never
   going to be Erick Porche, and he's got some state records.
                                                                       5 been over there when it was operating, so this was a very good
        3. State Records
                                                                       6 opportunity to actually see the structure. And it's pretty
                  MR. PORCHE: Good morning. We just have two
                                                                       7 impressive. Three hundred fifty gates total. There's 20 pins
7 records this month. Both of them are conventional tackle.
                                                                       8 to each gate. And it's a 7,000 foot structure.
                  The first one is for a creole fish. It's a
                                                                                        The design capacity is for flow of 250,000 cubic
9 first time entry, paranthias furcifer. It's a new record of 1
                                                                      10 feet per second. And at the maximum, it got up to a total of
   pound 8.69 ounces caught by Cecily O'Brien.
                  MR. TAYLOR: What's the difference from this and
                                                                      11 316,000 cubic feet per second.
11
12 a red snapper? Most people would think this was a juvenile red
                                                                                        Here is a closed bay which there was a little
                                                                      13 gap in between there. You can see the water flowing through.
13 snapper.
                                                                                        And with the bays opened, and I was lucky enough
                  MR. PORCHE: First of all, this is in the
14
                                                                      15 in this picture to catch -- see on the very corner there, that
   grouper family. One of the big things that you can look at and
                                                                      16 happens to be a silver carp. And Dale Diaz, he noticed just as
16 you can see in this picture here is if you look at the dorsal
                                                                      17 we got up there, within 50 yards of the shoreline, about one of
17 fin, you've got this really pretty yellow stripe up on the
                                                                      18 these was jumping every minute. And so we do have silver carp
18 dorsal. The axle spot on the pectoral fin isn't nearly
                                                                      19 that have been introduced on the Pontchartrain side of the
19 distinct as it is on a red snapper either. And you've got a
20 much more forked caudal fin. That will be the easiest way to
                                                                                        I thought this was a pretty impressive picture.
   identify the two.
                                                                      21
21
                                                                      22 This is with all 320 bays open out of the -- I'm sorry -- 330
                  The easiest is to look for the yellow.
22
                                                                      23 out of the 350 total. So that was a pretty impressive picture.
23
                  And Mrs. O'Brien and her fish.
                                                                      24
                                                                                        And to the left there, that's the Pontchartrain
                  The second one is for bigeye tuna, thunnus
24
25 obesus. It's also a new record, first time entry, of 92 pounds
                                                                      25 side.
                                                                       1
                                                                                        And on the right is the Mississippi River side.
1 2.88 ounces, caught by Stacy Combs. And Mr. Combs and his
                                                                                        And we did have a picture from 2008, the last
2 tuna.
 3
                  Any questions?
                                                                       3 time they had opened it. It was an astronaut picture, and so I
                                                                       4 searched for another one, and sure enough, they took another
                  DR. ASPER: Is there a motion to approve these
 4
                                                                       5 picture for this year. And this is from May 17, and you can
5 records?
                                                                       6 see the Mississippi River coming down through here. Here is
                  MR. DRUMMOND: I make a motion to approve these
 6
                                                                       7 the City of New Orleans. And the spillway is designed to
   new records.
                                                                       8 protect the City of New Orleans.
                  MR. BOSARGE: So second.
 q
                  DR. ASPER: Those in favor say aye. Those
                                                                                        We were also looking at some satellite imagery
                                                                      10 and had to go back to June 18. And we've had all these clouds
   records are approved. Congratulations to the anglers.
10
                  MR. PORCHE: Thank you very much.
                                                                      11 around, but we haven't been able to get the precipitation out
11
                                                                      12 of them that we would like.
12
        4. Bonnet Carre Update
                                                                                        Again, this is Lake Pontchartrain here. You can
                  MR. DIAZ: Next up for marine fisheries, Scott
                                                                      13
13
   Gordon is going to give an update on the Bonnet Carre Spillway.
                                                                      14 you see the Bonnet Carre Spillway is down in the southwest
14
                  MR. GORDON: Good morning, Mr. Chairman,
                                                                      15 corner of Lake Pontchartrain, and then it flows through the
15
                                                                      16 Rigolets and across Lake Borgne. And here is St. Louis Bay,
   commissioners, Sandy, Colonel Chatagnier.
16
                  I'm happy to report that the Bonnet Carre
                                                                      17 Cat Island, Ship, Horn. And we did see -- throughout this we
17
                                                                      18 did see plumes of water that -- or turbidity that seemed to get
   Spillway was totally closed as of yesterday. We had a total
18
   of I believe it was 330 gates that they had open during the
                                                                      19 as far as the Belle Fountain Point area.
                                                                                        And again, this is the Mississippi River gauge
20
   event. And they closed the very last one yesterday.
                                                                      21 at New Orleans. Formerly they called it the Carrollton gauge.
                  This is the same background information that I
21
   gave to the commission last month with the update that it did
                                                                      22 And they were able to maintain with the addition of opening up
22
                                                                      23 the Morganza Spillway a 17 foot stage in New Orleans. So they
   close yesterday.
23
                                                                      24 were cutting it fairly close there.
                  And to familiarize you with the locations of the
24
25 spillway, here is the Mississippi River coming down. And here
                                                                                        When we went over to the Bonnet Carre Spillway,
```

1 you something at the August meeting as the motion indicated a

1 spillway opened, we were in the neighborhood of around eight

```
2 spillway, and I was able to get this picture of the levee.
                                                                       2 parts per thousand, and it dropped down to I know the lowest
 3 This is the Mississippi River is over on the left-hand side,
                                                                       3 that I've seen it was .4 parts per thousand. That's drinkable
 4 and you can see the water level here. And down below, you can
 5 see the road. And I thought it was interesting to see the
                                                                                        Merrill Shell Bank Light, it dropped down also
 6 school buses.
                                                                       6 as low.
                  So that's one of the reasons why it was
                                                                                        As you can see here, we had a lot of
   important for them to open up the Bonnet Carre Spillway to keep
                                                                       8 fluctuations, and that's where the tidal -- the tides were
 9 all of these areas from flooding.
                                                                       9 moving in and they were moving the higher salinity offshore
10
                  This is looking at the Bonnet Carre Spillway
                                                                       10 waters mixing in with the fresher waters.
11 operation from when it first opened up in early May until it
                                                                                        And then as the event continued, you saw less
12 was closed yesterday.
                                                                      12 fluctuation there because we had fresh water throughout the
13
                  And this is flow. The flow is going to be the
                                                                      13 entire area.
14 blue lines here. And that's in cubic feet per second. And
                                                                                        So as they had started to close the spillway,
   then the red lines are going to be number of bays open. So it
                                                                      15 you can see the fluctuations became even greater. So that
16 only got up to 330 bays open.
                                                                      16 water is being mixed.
17
                  And even though you might look back and say,
                                                                                        And this is Gulfport Light. We got down to
18 well, there were other years they opened up all 350 bays, you
                                                                      18 maybe about two parts per thousand. And that was a pretty
   know, so there were more substantial openings, this was still
                                                                      19 drastic decrease.
   pretty substantial because they were above the design flow or
                                                                                        East Ship Island Light, we saw there was even
   the design capacity for the structure.
                                                                      21 some effects there.
                  Again, it opened up on the 9th of May and closed
                                                                                        And East Ship Island Light, it was good that
   the 20th of June.
                                                                      23 they have a DO meter on there, as well, and we did have some
24
                  It was operated a total of by my calculations 42
                                                                      24 oxygen problems in there towards the end of May, first part of
25 days. There were 316,000 cubic feet per second. And I think
                                                                      25 June and about the second week in June.
                                                                                                                                   15
 1 to put that into some kind of real -- something I could wrap my
                                                                                        This is not really pertaining to the Bonnet
 2 head around, that was the equivalent of approximately 3.6
                                                                       2 Carre, but this is one of the rivers that we normally would
 3 Olympic size swimming pools per second going across the
                                                                       3 deal with. This is the Pearl River gauge at Pearl river,
 4 spillway.
                                                                       4 Louisiana.
                  The average flow was 210,000 cubic feet per
                                                                                        And the little triangles on here, this is the
 6 second. And the total volume was 8.654 thousand daily second
                                                                       6 main daily statistic over a 14 year period. And we have been
 7 feet. I've seen this put in different terms. The second date
                                                                       7 well below that. The current river stage is somewhere around
 8 feet, that would be the number of cubic feet per second that
                                                                       8 four foot. And that's one of the things that has really helped
   goes through the structure in an entire day.
                                                                       9 us.
10
                  Also from my calculations I estimated the total
                                                                      10
                                                                                        Dealing with the flood situation when we are
11 discharge to be 5.6 trillion gallons of water. And again, to
                                                                      11 under an extreme drought, we didn't have the same effect that
12 put that back in the Olympic swimming pool realm, it would be
                                                                      12 we would have seen if the rivers had been up towards their
                                                                      13 normal levels because that's additional fresh water moving in.
13 8.5 million Olympic size swimming pools. Or it would have been
   enough water to fill the entire Mississippi Sound to a depth of
                                                                      14 Since they weren't contributing as much to the fresh water that
   14 and a half feet. I believe that includes Alabama waters, as
                                                                      15 we saw from the Bonnet Carre, I believe that's one of the
   well.
                                                                      16 things that may have helped us.
17
                  We had a lot of constant recorder instruments
                                                                      17
                                                                                        Oysters. We've been sampling the oyster reef
   that have been in place over the years. But they've been very
                                                                         areas, and we have seen mortalities range from early on from
   helpful in this. And the main ones we're going to be looking
                                                                      19 about six percent mortalities all the way up to 95 percent.
   at is the Rigolets, St. Joe, Merrill Shell Bank, Gulfport
                                                                         And I imagine we'll probably have, especially around the St.
   Light, and East Ship Island.
                                                                      21 Joe reef area which is our furthest reef to the west, I would
                  And at the Rigolets, you can see this is the
                                                                      22 expect us to see 100 percent mortalities there.
23 salinity. The salinity dropped off pretty drastically from
                                                                                        We were seeing oysters in some of the areas.
  about between four and five down to one and even below.
                                                                      24 They were feeding early on. As the fresh water moved in, they
```

1 we happened to go over the Mississippi River just south of the

25

25 stopped feeding. And they were swollen up. They couldn't

16

And at St. Joseph Island Light, before the

```
1 some of our western reefs. And it looks like this fresh water
1 close their shells. In fact, one of the biologists said a lot
                                                                       2 is going to be able to control them.
2 of those oysters were dead and they just didn't know it yet.
                  So we have some of these were live oysters in
                                                                                        The extreme drought conditions along the coast
4 here. You can see the color is still pretty good. But then we
                                                                       4 have helped through the lower than average river flows, the
                                                                       5 increased nutrient load, phytoplankton blooms, and lower oxygen
5 had some that were dead in the shell which one of the guys
                                                                       6 levels. That's something that we will be closely following
6 referred to fondly as zombie oysters. You can see that that's
                                                                       7 throughout the summer.
   pretty disappointing to see that there.
7
                  And we would also find a lot of these empty
                                                                                        Possible permanent introduction of invasive
                                                                         species into coastal rivers and streams, and a delayed or
9 shells that were fresh dead. The inside of the shells were
                                                                         setback coastal restoration activities, and salinities
10 still clean, you know, the meat had already -- something had
   gotten in there and eaten out the meat of them. But we've got
                                                                         gradually returning to normal levels.
                                                                                        And we will continue to identify and monitor
12 at least three of them here in this picture.
                                                                      13 areas over the next several months and document any potential
                  I'm hoping this video will work. This is one
13
14 that we took on the Bonnet Carre Spillway. And let's see how
                                                                      14 impacts.
   good your eye is, see if you can catch the silver carp jumping
                                                                      15
                                                                                        Any questions?
                                                                                        DR. ASPER: Thank you, Scott. Any questions?
16 in there. We're making it a little easier for you.
                  It's a short video.
                                                                                        MR. DRUMMOND: Where was the school bus? Is
17
                  (Video was played.)
                                                                      18 that New Orleans?
18
                  MR. GORDON: That's looking towards Lake
                                                                      19
                                                                                        MR. GORDON: No. That was just to the south.
19
                                                                      20 I'm not sure of the little town, but it was just to the south
  Pontchartrain and the railroad bridge, and that's back towards
20
                                                                      21 of Bonnet Carre. It was the first little town there. I'm not
   the spillway structure.
                  You can see that's a several foot drop from the
                                                                      22 real familiar with New Orleans.
22
23 Mississippi River down to the actual spillway structure itself.
                                                                                        DR. ASPER: Just to be clear, so far we haven't
   So that's what it's trying to meant to level out.
                                                                      24 seen the silver carp in Mississippi waters yet.
                  When we saw these fish we were able to get this
                                                                                        MR. GORDON: Not as of yet. And I hope we
25
                                                                                                                                   19
1 video and take one of the pictures, I contacted the Mississippi
                                                                       1 don't. As fun as it looks on some of those videos, I'd rather
                                                                       2 we not have it here.
2 Department of Wildlife, Fisheries & Parks and spoke with the
3 head of their freshwater fisheries division and informed him of
                                                                                        MR. GOLLOTT: Scott, what about the tonging
                                                                       4 reefs? Have y'all looked at that?
   what they might have to be dealing with.
                  My concern would be this getting into the Pearl
                                                                                        MR. GORDON: Yes, sir. We were seeing
6 River system and also into the St. Louis Bay and the Wolf and
                                                                       6 mortalities on just about all of our reefs. And we did have
   Jourdan Rivers.
                                                                       7 salinities as low as I believe about one part per thousand on
7
                                                                       8 there. And so we're going to continue our monitoring. I think
                  So the carp that we were seeing is this silver
8
  carp right here. And I know they're saying the salinity
                                                                       9 that fared maybe a little better than some of the other reefs.
   tolerance is low, four parts per thousand, we certainly had
                                                                      10
                                                                                        DR. ASPER: Thank you, Scott.
                                                                                        MR. DIAZ: And last up for marine fisheries,
   below that, in some of the other literature that we had looked
12 at, there was indications they could handle as high as seven
                                                                      12 Traci Floyd has a shrimp season report.
   parts per thousand.
                                                                                  Shrimp Season Report
13
                                                                                        MS. FLOYD: Good morning, Mr. Chairman,
                  Okay. Some of the seen or expected effects that
                                                                      14
14
15 we should expect, many of the mobile species, shrimp, finfish,
                                                                      15 commissioners, chief, and Sandy.
16 and crabs should be able to continue moving ahead of diverted
                                                                                        This is the shrimp season report.
                                                                      16
                                                                                        Mississippi shrimping grounds opened May 25 at
17 floodwaters. And Traci Floyd is going to be speaking
                                                                      18 6:00 a.m. when sampling showed that shrimp had reached the
18
   specifically about shrimp in her next presentation.
                                                                      19 legal size of 68 count per pound.
                  There have been reports of reduced crab harvest
19
20 in the western Mississippi Sound, increased mortalities of
                                                                                        Based on records going back to Year 1975, this
21 larval stages and young unable to escape. Significant
                                                                      21 is the earliest opening, as we typically open in June.
                                                                                        Since April 30 and in preparation for the coming
22 mortalities of oysters and other sessile benthic marine or
                                                                      22
   estuarine species in the western Mississippi Sound.
                                                                      23 season, we have sold 453 resident commercial shrimping
23
                                                                      24 licenses, 134 nonresident commercial, 117 resident
                  This is a good thing. Increased mortalities of
24
```

25 recreational, and one nonresident recreational.

20

25 the predatory oyster drill. We've had a problem with that on

```
In our aerial survey on opening day, we counted
                                                                                        This final column over here is 2011. What we're
 2 162 boats. And, of course, these are recreational, commercial,
                                                                       2 looking at are the six years since Katrina since we've seen
 3 nonresident, and resident.
                                                                       3 that decrease in effort.
                  And most of those boats were congregated around
                                                                                        So in 2011 for brown shrimp, this blue number
 5 Horn Island. And as you can see, this continues our downward
                                                                       5 down here, over 900,000 pounds of brown shrimp landed in the
   trend in effort in the fishery.
                                                                       6 first two weeks at our Biloxi dealers. Over 267,000 pounds of
                  This is a look at our historic nine shrimp
                                                                       7 white shrimp.
   sampling stations. We did do some additional sampling that is
                                                                                        And when you look at these six years for those
   ongoing in response to the Bonnet Carre opening.
                                                                       9 two weeks, 2011 is in second place behind 2007 which you may
                  But in advance of the fresh water coming into
10
                                                                      10 recall is a very good year.
11 Mississippi, we were catching excellent numbers of brown shrimp
                                                                                        MR. TAYLOR: What was the effort in 2007, the
                                                                      11
12 at all of our stations. And as the fresh water came in, we
                                                                      12 number of boats? Could you back up a slide? Three hundred as
   continued to see that at all of our stations.
                                                                      13 compared to 162.
                  The only exception is at Stations 5 and 6 the
                                                                                        MS. FLOYD: So about half.
15 week of June 8 we did have some low dissolved oxygen levels
                                                                                        MR. TAYLOR: Seems like the number of boats are
                                                                      15
16 that Scott mentioned in his presentation around Ship Island,
                                                                      16 catching (inaudible) shrimp per boat.
17 but we did not catch any shrimp that week at those two
                                                                                        MS. FLOYD: Also, to look at the size of the
   stations. We did, however, catch hardhead catfish, croaker,
                                                                      18 brown shrimp where the majority was landed for these six years,
   and blue crabs.
                                                                         you see they're either in the 41-50 or 51-60 range. And for
20
                  So this is a look at the opening by week. As I
                                                                      20 2011, that's where the majority lie and follow that trend.
21 said, May 25, we had 162 boats counted. That week, in the DMR
                                                                                        This is just another way to look at those
   sample, the size of the average brown shrimp was 55 count.
                                                                      22 numbers. The red bar represents the brown shrimp. The blue
23 Fishermen reported to us fair to good numbers of 41-50s to over
                                                                      23 bar represents the white shrimp. Here is 2011 and second as
   70 count size shrimp.
                                                                         far as landings for these first two weeks behind 2007.
                  The next week June 1, our flight showed 29 boats
                                                                      25
                                                                                        And I would be happy to answer any questions you
 1 working. The DMR samples showed an average brown shrimp of 61
                                                                       1 may have.
 2 count. Fishermen reporting fair catches of 41-50s to 61-70
                                                                                        MR. BOSARGE: I guess by opening it earlier it
 3 count shrimp.
                                                                       3 appears that it hasn't hurt anything, but it did allow our
                  And for June 8, the next week, we saw more
                                                                       4 fishermen to produce some pretty good shrimp from what I see.
 5 boats. And 62. About a third of those were working over in
                                                                       5 Is that what you ---
 6 the western Sound. And that week, the average brown shrimp was
                                                                                        MS. FLOYD: Yes, sir, I agree.
 7 57 count. And our samples of those seven historical stations
                                                                                        DR. ASPER: Traci, do you have any idea why the
   and fishermen working the entire Sound told us that shrimp were
                                                                       8 shrimp are a little bit small this year? Does it have anything
 9 thick that week, meaning very good harvest, 41-50s to over 70
                                                                       9 to do with the fresh water, does it have anything to do with
10 count.
                                                                      10 the opening early? Do you have any ideas on that?
                  And then last week June 15, we counted 16 boats.
                                                                                        MS. FLOYD: We did open it a bit early. And if
12 In the DMR sample, the average brown shrimp was 62 count.
                                                                      12 you have your shrimp newsletter there, if you look on Page 2,
   Fishermen reporting fair to good numbers depending on where
                                                                      13 you see that we had different peaks of post-larval shrimp. And
   they're working of 41-50s to over 70 count shrimp.
14
                                                                         as those grow and move offshore, you will see that.
15
                  And interspersed in the brown shrimp catches are
                                                                                        So we do have small shrimp still. It's an early
   very nice white shrimp, 21-25s and larger, continue to be
                                                                      16 opening. But typically we do see smaller shrimp to the west.
   there, and last week we did see some of the small white shrimp
17
                                                                      17 That's what we're seeing this year. But, of course, the Bonnet
                                                                         Carre could have an impact.
18
   showing up.
                  So this is just a look at landings since
19
                                                                      19
                                                                                        MR. GOLLOTT: Traci, what you're saying that
   January, very preliminary, of course. But so far for
                                                                      20 maybe the Bonnet Carre has pushed some of those smaller shrimp
   Mississippi, all species heads on, a little under two million
                                                                      21 out of Lake Pontchartrain and Lake Borgne into the Mississippi
22 pounds.
                                                                     22 Sound.
23
                  And we broke that down further to look at just
                                                                     23
                                                                                        MS. FLOYD: It's possible, yes.
24 the first two weeks of shrimp season. And this is based on
                                                                     24
                                                                                        DR. ASPER: Anything else for Traci?
25 landings reported by our Biloxi dealers.
                                                                      25
                                                                                        PERSON IN AUDIENCE: We have a question over
```

```
1 shrimp around here, might have some of them made 40-50s this
 1 here.
                                                                       2 week, what few are there, but as far as opening and all, there
                  DR. ASPER: We have two gentlemen who have
 2
   submitted requests to make comments, so we'll take those in
                                                                       3 were no 40-50s caught in Mississippi.
                                                                                        And also these landing reports here, I don't
   turn. Catfish and then Mark come to the podium.
                                                                       5 like it. It's false information. And I don't know how to
                  You have three minutes, so just try to keep your
 5
                                                                       6 classify this false information. But I feel the need for trip
   comments concise.
                                                                       7 tickets in our industry in the State of Mississippi once again,
                  MR. STEWART: Mark Stewart, commercial
                                                                       8 you know.
   fisherman.
 8
                                                                                         I haven't heard a word about any assessment of
                  I think that something else may be wrong that
  hasn't been mentioned here today about the BP oil spill.
                                                                       10 any oil spill damages that we're seeing from shrimp season.
10
                                                                      11 I'm very disappointed in that. That's all I have to say.
                  Yes, the season opened early. The shrimp were
11
   small. But it's not early any more, and the shrimp are very
                                                                                         DR. ASPER: Thanks, Mark.
12
                                                                                         Traci, are we still sampling the shrimp for
   small, what few are there. They're very scarce.
                                                                      13
                  And these reports for these landings in
                                                                      14 traces of the hydrocarbons?
14
                                                                                         MS. FLOYD: Yes. That is ongoing indefinitely.
15 Mississippi are very deceptive. These shrimp haven't come from
16 Mississippi. These shrimp are coming from Louisiana and the
                                                                      16 And you can find those results on our web page updated monthly.
17 Gulf. There were a few caught here like the second week of the
                                                                                         I did want to respond to what Mr. Stewart said.
                                                                       18 Yes, we do have Louisiana shrimp reported in those landings,
   opening. They were very small. Where the 40-50s were caught
19 at, I guess I don't know what I'm doing because I haven't seen
                                                                       19 but what our port agents tell us and what we've seen over the
   any, or either the factories are getting me on the count. I
                                                                       20 years is this is indicative of the shrimp season throughout the
                                                                       21 Sound.
   don't know what it is.
21
                                                                                         So we do look at those landings that way.
                  I got 50-60s, very few 60-70s and 70-80s.
                                                                       22
22
                                                                                         And also the 40-50 count shrimp were reported
23 That's what I've caught in Mississippi.
                                                                       23
                                                                       24 more to the east, and some of those are sold in Alabama. So {\mbox{\scriptsize I}}
                  Opening day of the season, I had to go back to
24
25 Louisiana because I didn't catch any. The second week, I did
                                                                       25 just wanted to note that, as well.
                                                                                                                                    27
 1 catch some. But right now, the shrimp aren't there. Where are
                                                                                         MR. MILLER: How y'all doing today? My name is
                                                                       1
                                                                        2 James Miller a.k. Catfish.
 2 they at right now?
                                                                                         I'm disappointed today. I get up here and
                  As far as these good catches and landings last
 3
 4 week or two, I don't know of them. They're not here. And the
                                                                        4 listen about the oysters real quick. Nothing was said about
                                                                        5 the oil spill, what they done to our oysters before the fresh
 5 shrimp are still small. And the season, by this time we should
 6 be looking at 36-40s to 26-30s under these islands, and they're
                                                                        6 water got to them.
                                                                                         You can go back and play some of my videos. I
 7 not there.
                                                                        8 stayed on top them oyster reefs for six weeks after the oil
                  There's nothing there, you know.
 8
                                                                        9 spill, and it wasn't very nice.
                  MR, BOSARGE: I tend to agree with you on some
                                                                                         Them oysters was killed by that oil. And I'm
10 points. But there have been some good catches in the eastern
                                                                       10
11 Sound and still are. And like --
                                                                       11 here to say that and living proof because I stayed out there.
                  MR. STEWART: Yes, toward Alabama. I know.
                                                                                         And I'm full of hydrocarbons, too. I've had
12
                  MR. BOSARGE: And you have to wonder why these
                                                                       13 blood tests done to me. I'm doing a detox right now from the
13
   shrimp are quite small, maybe -- whatever, we don't know, oil
                                                                       14 VOO program. I've been deathly sick. I've been going to a
   spill, fresh water, whatever, they are running I agree smaller
                                                                       15 detox person, seeing her pretty frequently.
                                                                                         But my big issue today, Richard Gollott, is
   than normal. I was just proud to see that there were some.
                                                                       16
                                                                       17 about our shrimp prices. Who controls our shrimp prices in
17
                  MR. STEWART: Right. I was, too. But there
   wasn't in the beginning for me. You know, the boats under
                                                                       18 Mississippi across the board? Why are they so staggeringly low
18
                                                                       19 right now? Forty cents, 30 cents, 55 cents, 65 cents. I've
19 Horn Island just catch a few shrimp for about half a day, and
   they were gone. Cat Island where I was at, Gulfport, you
                                                                       20 caught 60,000 pounds of shrimp in about five weeks. I'm a hell
                                                                       21 of a fisherman.
   couldn't have made a po-boy around there. Not even one. And
                                                                                         But I want to know why I got ripped off $17,000
   the shrimp were very small on top of it.
                                                                       22
                                                                       23 in five weeks on my produce here in Mississippi where I landed
                  Yes, the fresh water did come after that and
23
                                                                       24 it.
24 pushed the shrimp out, you know. It did do that.
                                                                       25
                                                                                         And you know, you being a dealer and a processor
                  But these reports right here of 40-50 count
25
```

```
1 -- and we want to know how do y'all set y'all's prices, being a
                                                                       1 dealer on the coast? Have y'all talked to him personally? I
 2 board member -- I'm coming for some advice here, and I'm
                                                                       2 talk to him every day.
 3 seeking, because everyone I've caught, I talked to Dean
                                                                                        This dude buys millions of pounds of shrimp
 4 Blanchard, the biggest processor down there that buys shrimp
                                                                       4 daily. I'm not kidding you.
 5 for Grand Isle, he's disturbed now because we're going to be
                                                                       5
                                                                                        MR. BOSARGE: I know. You asked the question,
 6 marching on Capitol Hill tomorrow about shrimp prices.
                                                                         and I was --
                  This is true and live. We might be burning a
                                                                                        MR. MILLER: And I want a really answer. Don't
   petroleum flag out there tomorrow, too, if something don't be
                                                                       8 fog me with some foreign shrimp. We live in America.
   done here shortly in our life.
                                                                                        MR. BOSARGE: But that's what sets our price,
                  But who's controlling this, Mr. Richard, our
10
                                                                      10 Catfish. That's what sets our price. And we're working on
   price setting on our brown shrimp and white shrimp in
                                                                      11 trying to differentiate domestic shrimp from imported shrimp.
   Mississippi? Can you give me some advice, please?
                                                                                        MR. MILLER: You're telling me that Vietnam,
13
                  MR. GOLLOTT: No.
                                                                      13 Thailand, Ecuador, Brazil controls my white shrimp price at my
                  MR. MILLER: Well, you're on our board, Mr.
14
                                                                      14 dock that I unload here in Mississippi; right?
15 Richard, and you should have the brain -- I'm a fisherman that
                                                                      15
                                                                                        DR. ASPER: Okay. I believe we've reached the
   sells my shrimp to you. And I just want to know who sets our
                                                                      16 end of this discussion.
   prices. You're a processor. We sell our shrimp to you. I'm
                                                                      17
                                                                                        MR. MILLER: Mr. Vernon --
   begging the difference. Who sets the prices?
                                                                      18
                                                                                        DR. ASPER: It's a matter of opinion. It's --
19
                  I watched the Alaska King crabbers. They all
                                                                      19
                                                                                        MR. MILLER: I didn't come for an opinion, Mr.
   sit at a table and set the price before they leave the dock.
20
                                                                      20 Vernon. I come to get some literature on who's setting the
                  Why we have the lowest prices on our shrimp?
21
                                                                      21 prices in Mississippi on our brown shrimp and white shrimp; and
22 I'm begging you, tell me. You're a processor. You buy my
                                                                      22 the landings, they're wrong. I know y'all don't even want me
23 shrimp. Who sets the prices?
                                                                      23 up here. Y'all hate me coming here.
24
                  I can't work for 35 cents a pound, sir. You're
                                                                                        But I'm sorry because I'm a concerned citizen
25 driving me in the ground while you drive a Rolls-Royce and I
                                                                      25 about our prices and what we're doing today to our industry.
 1 drive a Doodle Bug.
                                                                      1 And you people up there's got all the good answers. But we're
                  You want to go outside and look? I pull my
                                                                      2 living in the water, and we're seeing and living. You know why
   truck on the side of yours, and you'll say you're right, sir.
                                                                      3 our brown shrimp ain't growing?
 4
                  I want to know who's setting the -- do you have
                                                                                        DR. ASPER: Catfish, your time is up.
   any input, Mr. Bosarge?
                                                                                        (Several people speaking at one time.)
 6
                  MR. BOSARGE: I can't answer your question. I
                                                                                        DR. ASPER: Let me say just for the record,
 7
   can only speculate.
                                                                      7 Catfish, that we do not hate having you here. We really enjoy
 8
                  MR. MILLER: Well, speculate, because I'm
                                                                      8 having you here because you keep everybody honest. You bring a
   speculating, too, and I call people, I'm getting angry, and I
                                                                      9 perspective --
   can't get anywhere.
                                                                      10
                                                                                        (Several people speaking at one time.)
                  Who in Mississippi processors are setting these
11
                                                                                        DR. ASPER: We appreciate your input. But we've
   prices on these shrimp? That's all I need to know.
                                                                      12 heard your comments. We understand that there is a price issue
12
13
                  MR. BOSARGE: You know, Catfish, you've got to
                                                                      13 out there. Believe me, we would like to see the highest price
14 believe that it's a market -- the price is set by the market,
                                                                      14 we possibly can as an agency because we pride ourselves in
15 supply and demand.
                                                                      15 being able to make the very best use of this resource that we
                  And as you know, I'm also a board member on
16
                                                                      16 can. And we're not trying to hurt anybody. We're trying to do
   (inaudible). And prices on small shrimp, that's going to be a
                                                                     17 the very best job we can.
18
   tough nut to crack in that they can raise them so much cheaper
                                                                     18
                                                                                       Okay. Thank you very much.
   than catch them. And because we're only ten percent of the
                                                                     19
                                                                                        We'll move on now to I believe coastal ecology.
   market, you know, there's not a lot of room to bump that price.
                                                                     20 Are we through with fisheries, Dale?
   I was really surprised at the price what it was when we
                                                                                       MR. DIAZ: Yes, sir.
22 started.
                                                                     22 H. Coastal Ecology
23
                 MR. MILLER: You got to be kidding me. Have you
                                                                                       MR. BOYD: Good morning, Mr. Chairman,
                                                                     23
24 talked to Dean Blanchard?
                                                                     24 commissioners, Chief Chatagnier, Ms. Chesnut.

Coastal ecology only has one nonaction item for

Have you talked to Dean Blanchard, the biggest

25

```
1 you this morning. George Ramseur is going to give you an
2 update on our beneficial use program.
```

2. Program Status

8 here.

Update on Mississippi Beneficial Use Program MR. RAMSEUR: Good morning, Mr. Chairman, commissioners, Ms. Chesnut, Chief Chatagnier. Okay. I need a little technical assistance

9 Okay. I want to tell you a little bit about our 10 current use of dredge material here in Mississippi. I saw a cup the other day that said Rigs to Reefs program. I thought we needed our own slogan, so for now that's Muck to Marshes 12

13 program. A lot of what's driving the current efforts with 14 beneficial use of dredge material in Mississippi derive from

what we call the BU law, the beneficial use law. 17 There have been several changes in the law over

18 the years. This print is pretty small, but I highlighted in 19 red the changes that became effective a year ago.

Essentially now when dredging over 2500 cubic 20

21 yards of material in Mississippi, it's required that that

22 material go to beneficial use if the material is suitable and

23 there is a beneficial use project that the material can be placed in. 24

25

This recent change to the law was put together

1 talk about in a minute.

Okay. So why build marsh? One reason here in 3 Mississippi, it's the best use of our main material which is

4 for lack of a better term muck once you dredge it up. You

5 can't put this material out on the barrier islands. You can't

6 put it in environments that are sandy like the beaches or

7 anything like that. It takes a lot of effort to deal with this

kind of material.

Essentially what we've been doing so far is 10 building containment structures, putting material in the 11 middle, and then growing marsh because that's what the material, the soils are most suited for. But marsh is also one

13 of the most productive habitats we can work with.

And so it helps us get these projects permitted 15 when we're talking about taking waterbottoms and converting

16 them to another use, particularly NOAA/NMFS is a lot happier to

17 see us going to a higher value habitat like marsh.

We had a presentation from NOAA/NMFS at the BUG meeting we had this month. Texas, Port of Houston, Galveston,

has been working on this stuff about 20 years. And we're

21 trying to learn as much as we can from that program because

22 they've gone through some pretty radical changes since they

23 started with conventional structures like I was talking about,

24 a dike filled with material growing marsh. Now they're doing

25 entirely different things, and we'll also talk about that, as

1 by the beneficial use group which is called the BUG which is

2 now meeting here at DMR second Tuesday of every month, and it's

3 composed of a whole range of folks that I've listed the

4 attendees to date up there, but we have representatives from

5 ports, from our Senate and Congressional offices, all the

agencies working in the area.

And so it's a truly inter-agency collaborative 7 8 kind of group.

Why beneficial use? I just threw a couple of 10 pictures together. This is Deer Island in 1850. And as you know, it doesn't look a whole lot like this now. This 12 eventually became what they call Little Deer Island and then disappeared altogether. But we'll see some more shots of Deer

14 Island that show quite a bit of land loss, not only since 1850, 15 but since 1950.

Here is a shot of Fort St. Joe in Hancock 16 17 County. This is land loss here since 1957. So you've got 150,

175 feet of coastal loss here. 18

The whole idea is that until fairly recently, 19 20 most of the time we dredged, the material either went to a landfill or went in the deep water. And so we dug it out of 22 the nearshore system, and we then hauled it completely away. Now the idea is to try to keep this material 23 24 right here in the coastline and use it to rebuild coastal 25 margins like this and to do other things with it which we'll

1 well.

So we've got a good mentor here from the very 3 large program in Texas, and these are just a few slides that

4 Rusty Swaford showed us the other week.

Among other things, it's frequently said that 6 built marshes are not as productive as natural marshes. And 7 that's probably true, although their data seems to indicate 8 that they may be 70 percent of a natural marsh and maybe 12 to

9 150 times as productive as the open bay that was replaced.

I also want to say that I don't think anybody 10 11 has measured a built marsh that's 100 years old. So, we've got 12 some that are a couple decades old. But I think you can't

13 really tell what the long term is going to be.

Some of the productivity stuff form the Texas 15 marshes, it's been said by Zimmerman and other folks at NOAA 16 that the marsh edge is the important part, that sort of active 17 eroding and accreting edge of the march.

And this is just some numbers of brown shrimp. 19 And you see right here inside from the edge you've got your

20 thick density of brown shrimp. Same for blue crabs, very close

21 to the edge of this system. This is open water on the right,

22 and this is the marsh.

So we kind of have to have a balance of marsh 24 edge that's breaking down and providing this habitat. At the

25 same time, we can't let it break down and disappear. And a lot

```
1 of our shoreline where we have beach or bulkheads or that sort
 2 of thing, if the marsh breaks down all the way to the bulkhead,
 3 then you just got open water and you got to start from scratch.
                  So one of the strategies we have in mind is that
 5 we'll periodically rebuild some of these marshes. But we'll
 6 also talk about that for the end of this.
                  This is just some more of the work NOAA has
8 done. This kind of is a plan on one of the beneficial use
9 sites. And this is an edge data and elevation survey that just
10 tells more about how much of that critical edge is in the
   project and what their elevations are.
12
                  Work so far for us, I want to be clear that the
13 program we're talking about here, although DMR and Mobile Corps
   are basically the co-sponsors of the beneficial use group, we
   are focusing as DMR primarily on all the private dredging that
   goes on in Mississippi, private commercial. The Corps is
17 totally in charge of navigation dredging, although they are
   working very closely and I think very hard to maximize their
19 beneficial use.
```

But just private commercial dredging in

But the main work we've done so far really

But this is Deer Island before any beneficial

20

25

1 revolves around Deer Island. This is a shot back in early 2 2000. And BU efforts have been going on between Mobile and DMR 3 since early 2000, and they kind of got knocked off track during 4 Katrina, and we really got them back on about 2008 when we 5 started having the BUG meetings.

21 Mississippi this year we're set to break through two million

challenged year to year in just being able to have enough --

cubic yards of material. And we're really going to be

being able to accommodate all that material.

8 Deer Island showed it extending all the way out. This is 9 fairly recent. These yellow lines are 1957 and 1980 or thereabouts, and this shows where Little Deer used to be. And, of course, none of that is there, and you still see some loss

7 use project. One thing to note, the earlier 1850 picture of

of shoreline there on Deer. 13 Really, the first major beneficial use project 14 in Mississippi, the Corps put this in, and they've now turned

15 it over to us to manage, but this is what's referred to as the 16 204 site. It is about 50 acres marsh habitat. Trouble is it

17 didn't get real well vegetated before Ivan, Cindy, Katrina,

Gustav. This is what it looked like after Katrina, and this is

actually a barge out here working to reopen the access channel.

20 They're getting ready to put about 30,000 yards of sandy

material out of Graveline Bayou right on this corner.

But this project, this whole containment dike is 22

23 blown out, and it's basically short of the target for making 2.4

marsh as a result of Katrina.

25

Now, this is a real recent view. In conjunction

1 with the Corps, we have gotten this dike repaired. So this 2 project is now ready to take new dredge material. We'll get 3 the elevations up in there, and then we'll plant more marsh. 4 This is just way more open water than we want in there. We 5 want some open water, but not that much. By the way, this is the MISIP project to restore 7 Deer Island that the Corps has implemented. You know, they 8 restored the west end of the island and then the entire four 9 miles they pumped up this 200 foot wide berm, that's the width 10 on top, and this is to protect and restore the south shoreline 11 of Deer. 12 I mentioned that Mobile Corps is being very 13 proactive with beneficial use. The way the design worked out, 14 there's this large lagoon out to the south between the original 15 shoreline and the berm, and they're looking very closely at 16 putting the next cycle of Biloxi channel maintenance into this 17 lagoon and putting more marsh in there. If they're able to do 18 that, that's going to put us a long way towards sort of the 19 greater goal which is restoring Deer Island to about its 1850 20 footprint. 21 The next thing we have planned out there, you 22 all approved a permit for this meeting before last, but this is 23 an expansion -- this is the existing Deer Island marsh that we 24 looked at a minute ago. We're proposing about a 30 acre 25 expansion to the west. And so that will be the first project

1 where we have dug in and actually run the permit as DMR and are 2 working with private industry to expand marsh here on the north 3 side of Deer Island.

We've also got plans to go ahead and eventually 5 rebuild that east tip. This is just a sketch that shows where 6 we would need some wave protection here. That would be a dike 7 of some sort. This shows the original Deer Island marsh 8 expansion I just showed you, and then the Corps' beach 9 restoration runs right down here.

So you can see with the exception of this blue 11 area, we're moving along in the restoration of the island back 12 to its 1850 footprint.

This is a similar concept for Round Island. You 14 can see a fine yellow line in there which represents about the 15 1957 footprint. But roughly we are looking at possibly using 16 up to a million yards of sandy material which is pretty rare 17 for Mississippi to try and rebuild this island. The black 18 would be wave protection we'd need to add. Green is some 19 riprap that's already there associated with Round Island 20 Lighthouse project.

21 But that's just the type of thing we're looking 22 at doing.

The problem is we're very limited in how much of 24 this kind of area is available because of Gulf Sturgeon

25 habitat. If we really get going in trying to capture a million

```
1 or two million yards of material every year, we're going to run
  out of these places pretty quickly.
                  MR. DRUMMOND: Is that black area there, has
   that been placed on it?
                  MR. RAMSEUR: No, this is proposed right here.
  The green is in place. But otherwise, it's just this green and
6
   then what you see on the photograph.
7
                  We figure Round Island's got two more storms in
9
   it, and then it's probably going to be under water.
10
                  MR. TAYLOR: What is the depth of that lagoon
   behind Deer Island?
11
12
                  MR. RAMSEUR: It's about four feet deep in the
  middle right now.
13
                  Some of the other things we're going to need to
14
   work on, this is lower Escatawpa River. This the 613 bridge
   right here. Pelican Landing is right up here.
17
                  This is a current shot of that. Here is the
  Pascagoula River right here.
18
                  Now, look at -- there it is. That's 1958. We
19
```

20 estimate we've lost four to five hundred acres of marsh just 21 right here in this area since 1958. Various things have gone on. The main channel of the Escatawpa got dredged. But you can have a combination of hydraulics from channel dredging. You could have subsidence due to other reasons. One way or another, we know that we have lost a

going on just sort of our initial ideas.

Close to the last slide, I quess it's worn out.

24

25

3

7

8

10

16

23

15 the office.

into them.

```
1 lot of material in here, and this is not a place that's suited
2 to go in and put a dike and load a bunch of material in.
                  Now, the way Texas is handling situations like
4 this when you first see a slide of it, it looks like something
5 that would be illegal in wetlands here. But it's actually
6 this is the kind of thing we're trying to learn from them, not
                  And let me see if this will go ahead and load.
                  Well, the next and last slide is a picture of
11 the 30 inch pipe in Texas pumping dredge material directly into
12 open water areas in the middle of a big marsh. And as Rusty
   Swaford from NOAA said, if you walked into his office ten years
                                                                      13
  ago and showed him that picture, he would have run you out of
                  What they realize now that putting this material
17 into these subsiding marshes in an uncontained way is actually
                                                                      18 and in other words, they can grow their elevation some. But
  the best way to fix them. You can't, of course, go with no
                                                                      19 they seem to need a combination of all that, trapping sediment
19 containment or protection say on Deer Island because you've got
                                                                      20 that's in the water, growing, and then getting mineral sediment
   too much wave energy. But in places like this, and we've got
                                                                      21 in. And it's a little different for each system.
  literally thousands of acres in Mississippi of marsh that are
   subsiding that we can restore and enhance by pumping material
                                                                      22
                  So one of the things we really need to do in
25 terms of developing a program is come up with capacity and
```

```
3 up with staging areas for that material. And then we need
4 capacity to be able to take that material out and pump it into
  places like Escatawpa that so desperately need it.
                  So I would say long term based on what we've
7 seen in the last few years, as I say, we've got a million or
8 two million yards of very fine grain material and maybe another
9 20 or 30 percent of that in sand that's easier to deal with
10 that's going to be coming down the pike every year.
                  So any support for funding requests or
12 legislation to support this effort, I would appreciate your
13 support on it.
14
                  Any questions?
                  DR. ASPER: George, there was an article on the
16 front page of the paper, one of the sections of the paper this
17 morning, about sea level rise, that new study (inaudible). At
18 that rate, since 1950, when you showed the first picture, the
   sea level has gone up roughly six inches.
                  Do you ever feel like you're fighting a losing
20
21 battle here?
22
                  The subsidence in sea level rise, are these
23 projects really going to do a good job? I'm just playing the
24 devil's advocate here because I really think what you're doing
25 is great and necessary. But it's also pretty frustrating.
                  MR. RAMSEUR: Well, that's a great question
2 because that's really precisely one of the goals with this is
3 to -- you can actually -- marsh is dependent on the particulars
 4 can accrete and keep up with sea level rise to an extent. But
 5 we can actually, the ones that are not keeping up, we can
 6 actually build them up particularly with this pumping method.
                  And then also on other projects, like the
8 containment one at Deer Island that we have a permit pending
9 for, we actually are setting up sort of a chenier like -- some
10 high ground on the back side so that if it starts getting
11 overwashed a lot we'll have material automatically eroding into
12 the marsh.
                  And again, that's one of those things that
14 normally people think about being a bad thing, you've got to
15 put up a silt fence. But those things need material. They can
16 accrete by collecting total suspended solids in the water.
17 They can accrete by just creating plant mass from nutrients,
```

1 methods for both collecting dredge material from a lot of the

2 small jobs that people haul away with trucks, we'd like to come

```
1 marshes will also tend to move up slope as the water comes up,
                                                                        1
                                                                                      BEFORE THE COMMISSION ON MARINE RESOURCES
 2 and if you've got bulkheads or other built environment, they
                                                                        2
 3 can't do that.
                                                                        3
                   So we're kind of focusing on state owned areas
                                                                        4
   that -- where we kind of have a little more control on the land
 6 side where we can both build the marshes up and also maybe
                                                                                          COURT REPORTER'S CERTIFICATE
                                                                        6
    provide a room for them to slide up slope.
 8
                   DR. ASPER: Anything else?
                                                                                     I, Norma Jean Ladner Soroe, Certified Shorthand
 9
                  MR. RAMSEUR: Thank you very much.
                                                                        9 Reporter, do hereby certify that to the best of my skill and
                   DR. ASPER: I believe that finishes up the
10
                                                                       10 ability I have reported the meeting of the Commission on Marine
11
   coastal ecology. Are we finished with the agenda?
                                                                       11 Resources and that the foregoing 46 pages constitute a true
12
                  We have the financial report.
                                                                          transcription of said meeting held on the 21st day of June
13
                   PERSON IN AUDIENCE: Just come sit up there and
                                                                       13 2011.
   ignore me and act like I didn't ask to say something. I want

                  Are there any questions today?
                  DR. ASPER: Thank you, Kara.
                  Are there any other agenda items? Is there a
   motion to adjourn?
 6
 7
                  MR. GOLLOTT: I make a motion to adjourn.
                  MR. DRUMMOND: I second the motion.
 8
 9
                  DR. ASPER: Those in favor say aye. We're
10
   adjourned.
