

Invitation for Bids #3160005837 Inshore Reef Sidescan Assessment

Questions and Answers

May 9, 2023

McKim & Creed

Question:

In the deliverables “Provide square footage of bottom type for each artificial reef based on the side scan and bathymetry data.” Could you please clarify if we only need to provide distinction from what is reef versus what is the natural bottom? The reason we ask is because seismic surveys and/or grab samples may be necessary to verify the sediment types.

Answer:

We do not need to verify the sediment type through seismic surveys and/or grab samples. We are looking for the square footage of hard bottom versus the natural bottom (soft sediment).
