23	REPORTED BY:
24	Melissa Burdine-Rodolfich
25	mburdine@sbmreporting.com

# 1 CAM ROBERDS: 2 We want to welcome everybody to the 3 Mississippi Advisory Commission on Marine 4 Resources, Tuesday November 21st, 2023. 5 I'm going to ask chairman -- or 6 Commissioner McLendon if he would lead us in the 7 pledge. 8 (Pledge of Allegiance.) 9 CAM ROBERDS: 10 Thank you, Commissioner. 11 Mr. Joe, you want to lead us in a 12 prayer? 13 JOE SPRAGGINS: 14 I just want to, before we start Yeah. 15 and do the prayer, just tell everybody to please keep our country in your heart and in your 16 17 prayers. You know, we're going through some tough 18 times in America. And we're lucky enough to have 19 our governor back for four years, so we appreciate 20 that, Lord, and thank you so much for that. 21 But we also want to think of the people 22 over in Israel and Gaza and that area and, you 23 know, we just need to keep them in our prayers and 24 keep everybody understanding that there is a lot

of things going on in this world that's not right

25

```
1
      here in Gulfport and Biloxi, Mississippi but other
 2
      places.
 3
                 So if we could, let's go to the Lord in
 4
      prayer.
                 (Moment of prayer.)
 5
 6
      CAM ROBERDS:
 7
                 Thank you, sir.
                 Do we have any questions on the
 8
      October 17th minutes?
 9
10
                 If not, do we have a -- or I will make a
11
      motion to approve the minutes.
12
      JASON OSBORNE:
13
                 Second.
14
      CAM ROBERDS:
15
                 All those in favor?
16
      JASON OSBORNE:
17
                 Aye.
18
      JONATHAN MCLENDON:
19
                 Aye.
20
      CAM ROBERDS:
21
                 Aye.
22
                 Do we have any questions on the agenda?
23
                 If not, I would like to make a motion to
24
      approve the agenda.
25
      JASON OSBORNE:
```

1	Second.
2	CAM ROBERDS:
3	All those in favor?
4	Aye.
5	JASON OSBORNE:
6	Aye.
7	JONATHAN MCLENDON:
8	Aye.
9	CAM ROBERDS:
10	All right. Joe.
11	JOE SPRAGGINS:
12	Okay. We will go through this report
13	and try to get through it as quick as possible
14	here.
15	The employment contracts and updates,
16	procurement updates, can you put that up? All
17	right. Thomas Butera I'm going to mispronounce
18	it somehow or another, but anyway, Office of
19	Coastal Resources Management Wetlands Bureau, and
20	then Anthony Stringfellow is an ENRS II with
21	Office of Marine Fisheries, so two hires, new
22	hires.
23	Next.
24	And we have no report no contracts,
25	so we're good with that, and no procurement

1	update.
2	All right. If you have public comment,
3	I'd ask you to please see TJ in the back, and TJ
4	has got it. He'll be able to get you a form to be
5	able to get it up here to us, if he could.
6	Let's see. 2019 Bonnet Carré, we're
7	going to do agency update. Right now, we have
8	the charter boat fishermen have all been filed and
9	we're trying to get them paid and we're 50 or
10	72. We're 50 or 72?
11	LESLIE BREWER:
12	Seventy-two.
13	JOE SPRAGGINS:
14	Seventy-two. Have we got them all?
15	LESLIE BREWER:
16	Yeah.
17	JOE SPRAGGINS:
18	Oh, we're 100 percent?
19	LESLIE BREWER:
20	Well, we're waiting on a few checks, but
21	yes.
22	JOE SPRAGGINS:
23	But hopefully we get those out shortly.
24	As far as if you saw, we went out and also had
25	the commercial fishermen, and if you were an

oyster fisherman, then you had a check. The initial check was \$15,000, and then if you were another type commercial fisherman, but not oysters, it was 7,500.

The reason for that, for everybody to understand, is the oyster fishermen are still suffering. They still have not had an oystering season since 2018, and so we felt that they definitely needed an initial payment to help them get back.

And what we're looking at, after that, everybody else was 7,500. But the point will also be that if you had a loss up to \$108,000, I think it is, 108 and some few change, anything up to that \$108,000 that you would have lost in that one year of 2019, you're going to get made whole on it if you got all the paperwork and everything else. So that will come in Phase 2 of this in which they're working on now.

Right now, we're just trying to get the initial payments out. I have signed a bunch of them this week, and I know that they are going out, the ones we have got the agreements signed with the fishermen, so hopefully we will get them to them in the next couple of weeks and they'll be

able to get that initial payment out. Then we'll start working on what we call the second phase on that.

So if everything goes the way that we've looked at it, we will be -- about 95 percent of the people will get made whole, and that's pretty good. I tell you what, anytime that you can take a disaster and get 95 percent of the people made whole for one year, that is pretty good in what they did.

And how you get made whole, obviously we had 2014 to 2019, is whenever -- the disaster we was looking at, so anything -- if you had trip tickets and you turned them in from 2014 to 2019, and then we were able to take those trip tickets and we was able to figure out what an average for the year would be, and that's what you would be getting paid as if you would have worked the whole year of 2019. That's what our goal is. That's our goal, is to get everybody 100 percent to that point.

We're not going to get everybody. Some of your larger fishermen, especially the shrimpers, the large shrimpers, they are not going to be able to make whole because obviously they do

a lot more than \$100,000 a year, but the other thing is they were also able to go to other areas and shrimp. They could go to Florida. They could go over in the Alabama area and all and they could do other shrimping, so they did not get shut down like the other ones.

The small shrimpers here in the Bay, you know, that went inside the Sound and that area, they didn't have anything, so -- and the crabbers, the finfish, the oysters obviously didn't have anything for 2019. It was a total wipeout, so we're trying to make this as fair as we possibly can and hopefully everything will come out.

And then what we're also looking at, we were able to do another disaster for 2020 and it's about \$3 million. Is that right, Rick?

RICK BURRIS:

Yes.

#### JOE SPRAGGINS:

Yeah, about \$3 million, and so we will be able to use that as soon as we get it approved by the Secretary of Commerce. We're waiting on it now. And once it's approved by the Secretary of Commerce, we will be able to put that into -- and add to the -- what we're doing now. It was

1 around \$6 million that we were able to put out for 2 the fishermen this time, so we'll be able to put 3 another 3 million into that pot and hopefully that 4 will help. 5 So we're trying to -- also the processors -- well, the dealers, we're doing 6 7 theirs at around 12,000-something, I think is what 8 it was. We had 31 of them, and that process is 9 going through. 10 And then we had the off-bottom oyster 11 fishermen which also got wiped out. That was 12 going to be their first year basically, you know, 13 I mean, their first good year, and they get wiped 14 out, so around 18,000 for them. And then we 15 also -- bait fishermen are getting around \$18,000. And that's all coming together and it should 16 17 happen in a short time. And hopefully in the next 18 few weeks we will get those paid off. 19 Are there any questions on that, 20 Commissioners? 21 (No response.) 22 JOE SPRAGGINS: 23 Rick, did I leave anything out, Traci? 24 TRACI FLOYD: It's all good. 25

JOE SPRAGGINS:

Okay. All right. So anyway, hopefully we will get that.

Now, one of the things that we're also doing, we're working with the processors -- I mean, the -- yeah, the processors and we're going to be able to give y'all -- them some funds to be able to update their equipment because that was one of the things that we put in the process to be able to do that, so they can update their equipment. And we need to do that and help them get their equipment updated so they can move forward and not be behind the power curve that the other states have done.

We're working hard. Anything we can -we're trying to do some education with it. We're
doing some training with it. We're trying to -and just I want you to know, the State was allowed
to take around 18 to 20 percent and we did not
take it. We took a minimum of 10 percent to be
able to manage this, and that was -- even though
we could have taken double that, so I want you to
know that the State is trying to give as much of
it as they can to give back to the people that
need the money. And that's what we're working on

as hard as we possibly can. So if no questions on that, we will move on.

Senator Tommy Gollott, Lord have mercy, 50-something years that he was up in Jackson with us, and we're going to have the honor today to do a dedication for him. It's at the boat ramp at Bayview and Lee Street. And if you know the island out here, we used to call it — it had about 15 names in its lifetime, but I think Big Island was the last one, I think they called it, and we're going to name it the Gollott Island now, so Gollott is going to have his own island out here.

And then if you noticed on the Point out there where we put the breakwater and all, we're going to name that Godfather Point. And in case you didn't understand that, he was the godfather and, you know, especially in the Senate and the House up there, so it's going to be an honor.

If you can make it today, it's at 3:00. We would love for you to come. It's just an honor to honor a man that has put so much — he is the reason DMR is DMR. He is the instrument behind it, the one that made DMR a separate agency from Wildlife, so we owe him a lot. And the man has

put a lot in it for us and we appreciate him, and it's just an honor to be able to do that. So if you come today, we'd appreciate you coming out there because I know he would love to see you too.

We have got a holiday closure. We will be closed Thursday and Friday of this week, and

be closed Thursday and Friday of this week, and then we will also be closed on the Monday of Christmas and Tuesday after Christmas, and then we will be closed on January 1st. So the governor is giving them a couple extra days in there, so we thank him for that and we appreciate it. So if you got to do business with us, try to work it out before — around that, and we'll be glad to help you any way we can.

Our next commission meeting is scheduled for Tuesday, December 19th. Is there any problem with any of y'all on that?

CAM ROBERDS:

19 No.

20 JOE SPRAGGINS:

All right. So we will just leave that as it is.

Update on derelict vessels, we have 129 derelict vessel cases that have been reported since we started tracking. Eighty-two of them

have been removed, 47 are pending removal right now and we have got five that are in the court. So Floyd and them are doing a great job over there, so everything seems to be working out with the derelict vessels.

That's pretty much it on the agency update. Is there anything, any questions on anything else?

If not, then we'll go to actions updates from the prior meeting.

## STEVEN ECKERT:

Discussed at the October 2023 meeting, the Commission recommended and the Director approved the following motion: It was a motion to approve a variance and permit requested by the Jackson County Board of Supervisors for a variance and permit, requesting authorization to dredge an unnamed tributary to Bayou Porteaux, near Solano Circle in Jackson County.

Approval of the permit is contingent upon the use of turbidity curtains when a 10-foot buffer cannot be maintained between the dredging area and the submerged aquatic vegetation, and dredged material is made available for a beneficial use through MDMR's Beneficial Use of

1	Dredged Material Program.
2	And that's it for the actions update.
3	JOE SPRAGGINS:
4	All right. Any questions,
5	Commissioners?
6	All right. If not, then that's all I
7	have, sir. Thank you.
8	CAM ROBERDS:
9	Thank you, Joe. I know the commercial
10	fishermen and the for-hire guys have to be happy
11	about getting those funds to help them through
12	that tough, tough deal, so I know everybody
13	they all have to appreciate that.
14	Do we have any commissioners' reports
15	today, gentlemen?
16	JASON OSBORNE:
17	I don't really have a report, but I just
18	want to amend the prayer that was given and wish
19	the best to you and your family with the passing
20	of your mother this last Sunday. That's pretty
21	hard.
22	JOE SPRAGGINS:
23	Thank you. She was 96 years old and
24	lived a great life. And she was ready to go long
25	hefore we was ready for her to go. And as my

1 sister told me, she found her Sunday morning and 2 she was laying across the bed with a smile across 3 her face, so that means that she died happily. 4 Thank you. 5 CAM ROBERDS: You're absolutely in our prayers for 6 7 sure. 8 Chief Wilkerson, Marine Patrol report. 9 KYLE WILKERSON: 10 Good morning. What about this rain we 11 just received? That's a blessing in its ownself. 12 JOE SPRAGGINS: 13 Wasn't it? 14 KYLE WILKERSON: 15 Director, Marine Patrol would like to 16 wish our condolences towards you and your family, okay, for the loss. 17 18 JOE SPRAGGINS: 19 Thank you. 20 KYLE WILKERSON: 21 October looks like it was, once again, a 22 busy, busy month as Marine Patrol has done a 23 phenomenal job looking at the stats on all they have done. Checking 2,300-some-odd individuals 24 out there. Several citations were written. 25

1 Nothing just major jumps out at me. If you have 2 the report itself and you have any questions, I 3 would entertain them. 4 CAM ROBERDS: 5 I think we're good, sir. 6 KYLE WILKERSON: 7 Awesome. 8 CAM ROBERDS: 9 Thank you for your hard work. 10 Appreciate it. 11 KYLE WILKERSON: Once again, thank you. 12 13 CAM ROBERDS: 14 Office of Coastal Resources Management, 15 no presentation this month. 16 Restoration and Resiliency, no 17 presentation. We will move on to Office of Finance and 18 19 Administration monthly report, Leslie Brewer. 20 LESLIE BREWER: 21 Good morning, everybody. I will be 22 presenting the financials for the month of 23 October 2023. At the end of month, state revenue was 24 25 3.7 million. Agency revenue was 17.3 million.

1 State net income was 1.6 million, and 2 agency net income was 8.9 million. 3 After four months, our operating funds were at 96.6 for budget, and 87.8 for Tidelands. 4 5 Pretty normal. Y'all have any questions? 6 7 JOE SPRAGGINS: And I forgot to mention, we did get that 8 9 \$11 million Tidelands check, too, so that was very 10 good. 11 LESLIE BREWER: Yes, we did. 12 13 CAM ROBERDS: 14 Very nice. 15 All right. We have a Tidelands Trust 16 fund update, Sonja. 17 SONJA SLATER: 18 Good morning, Commissioners, Director, 19 Legal. I'm just giving you an update on our 20 21 activities with Tidelands applications for FY25. 22 We have already accepted all the applications. 23 They've been submitted for -- to be put in a book 24 and they will go to the legislators in January for 25 approval.

We received 86 applications, for a total of \$36 million requested from public access and managed projects. For public access, there was 28 million, and for managed projects, there was 8.6 million requested. And as you can see and from what the Director said earlier, that's way more than what we got. In 2024, we got 11.4 million, so we don't get -- we get way have more requests than we have funds for.

In our FY24 awards that are now awarded since we have the money in house, we were awarding 6.1 million. Hancock County got 1.2 of that. Harrison County got 2.4 of that, and Jackson County got 1.6 of it, with 833,000 going to miscellaneous projects.

For the FY24 managed projects, we received 3.9 for managed projects and 1.3 for the bond payment. Of the managed projects, we have not yet funded 1 million of it. That's still waiting to be funded. DMR has funded 2.7 million for DMR, and we have made our bond payment. And we have one miscellaneous project for 200,000.

This is our FY26 Tidelands application cycle. It's the same cycle every year, just changes the years, but the months and everything

1 stay the same. We will be accepting applications for the FY26 Tidelands cycle starting May 31st and 2 3 ending July 31st. We do this every year. Y'all have any questions? 4 5 (No response.) 6 SONJA SLATER: 7 Thank y'all for your time. 8 JONATHAN MCLENDON: 9 Thank you. 10 CAM ROBERDS: 11 Appreciate you. 12 Ms. Charmaine with Public Affairs. 13 CHARMAINE SCHMERMUND: 14 Good morning. 15 The Mississippi Department of Marine 16 Resources had nine media mentions since the 17 October MACMR meeting. News items included the 18 Eric Clark Coastal Preserve dedication, the 2019 19 Mississippi Bonnet Carré Spillway Fisheries 20 Disaster Recovery Program payout, and Director 21 Spraggins interviewed for an episode of the Brown 22 Water Banter podcast. 23 The office of Marine Patrol took part in 24 career day events for West Harrison High School, 25 Woolmarket Elementary School, Stone County High

School, Holy Trinity Catholic School, St. Patrick
High School and at the Katie Booth Community
Center. Additional events included Westminster
Presbyterian Church's fall festival, Long Beach
Police Department's Night Out Against Crime and
the Biloxi Police Department Community Festival
Against Crime at Point Cadet.

Marine Patrol, the Shellfish Bureau's
Harrison Pittmann and Will Larsen and Seafood
Technology's Jillianne Craft and Raul Anzola took
part in St. Martin North Elementary School's fall
festival on October 27th. Each department
provided an educational activity for students to
learn more about boat and water safety, shellfish
and seafood technology.

Seafood Technology Bureau's Jillianne took part in Boofest on October 21st, which was held at the Institute for Marine Mammal Studies. Finfish Bureau's Eric Gigli gave a presentation to the professional skills at GCRL on November 13th.

And Marine Patrol and the Artificial
Reef Bureau took part in Pathways 2 Possibilities
last week on November 15th and 16th. Marine
Patrol was stationed in the law and public safety
pathway, and the Artificial Reef Bureau had their

21 1 booth in the marine science pathway. The two-day event had thousands of students participate from 2 3 throughout the southern part of the state. 4 CAM ROBERDS: 5 All right. Thank you, Ms. Charmaine. 6 On to Office of Marine Fisheries, looks 7 like the first one involves the crab trap removal 8 program, Jason. 9 JASON SAUCIER: 10 Good morning, Commissioners. 11 I'm presenting to you today a proposal 12 from staff to conduct a derelict crab trap removal 13 program in early 2024. 14 So just to take a look at the history of 15 the program, MDMR started this program back in 16 That kind of gives you a summary by year or 1999. 17 by group of years there at the beginning. 18 first public cleanup was conducted in 2003. 19 That's what we're proposing in 2024. 20 In the past decade or so, we have had a 21 cleanup every two to three years on average. We 22

don't typically see -- do public cleanups more often than that just because there is not necessarily a need based on what we're seeing out in the environment.

23

24

25

And to date, we have collected over 22,000 pots in -- out of state waters. We recovered that much gear from the water.

So this was our most recent cleanup.

Back in 2021, we did a cleanup in late January,
and the green area there that you're seeing along
the mainland shoreline up to a half mile off was
closed for that cleanup, as well as all the bays
and Pascagoula River system. So this is more than
likely what we will propose to do for the 2024
cleanup, is to close those inshore waters.

So just to look at historical cleanups a little bit closer, these are the dates from previous cleanups. Like I said, the last one we had was in January. You typically have cleanups in the winter months of February, January. We have had a couple of late spring cleanups, but generally, we have proposed these in January, February, March, in an effort to accommodate the fishery as best possible and to take advantage of low tides.

State statute mandates that for crab trap closures for the purpose of removal of abandoned traps that we close waters no less than 10 days and no more than 30. Any trap remaining

after the seventh day of the closure is considered abandoned and can be removed by the general public based on statute.

The closure dates that we'll propose this year will be based on stakeholder feedback. We're working on postcards right now to send out to all license holders, that will go out either tomorrow or Monday, that will survey the license holders to see what dates work best for them and to solicit participation, volunteer participation from the fishery.

And so what we will do, once we set the date, there will be a couple of notices that go out and we'll do some other methods for getting the word out about the closure. But we typically plan the dates also based on weekends. We try to set the date so that it occurs, the cleanup occurs on Friday, Saturday, Sunday, and we try to schedule around other big events. One big event we typically have is Mardi Gras, so we try to work around that so we get as many volunteers as we can to the event. And then we look at tides. We try to plan around a low tide being in the morning, typically a higher range tidal cycle is what we're looking for so that the pots are exposed so

volunteers can see them.

And then this is a couple of examples of what we have done in the past. 2021, we put out a news release. We sent out two notices by postcard, notifying all the license holders of the closure.

Like I said before, we're going to propose this within one half mile of the mainland shoreline for 10 days, which is the minimum, and those dates will be set at a later time based on the feedback from the fishery. It will occur between January 1st and March 31st.

Crab fishermen will be allowed the first seven days of that closure, as is mentioned in the statute, as the time period for them to get the gear out of the water and on the -- at the end of the seventh day, then those pots are considered abandoned.

Volunteers will have three days on the back end of that 10-day closure to do cleanup. And then like I said, all crab fishermen will be notified ahead of time. We'll do the postcard mail-outs. We'll do a legal notice in the paper, press release and social media posts.

We'll have dropoff locations in each

county. Historically, those have been at Bayou Caddy, Ocean Springs Harbor and Pascagoula Point Park, and tentatively we'll stay with those same sites. We, in the past, have gotten roll-off dumpsters donated by a local scrap metal recycler and all of the pots that are recovered during the cleanup are recycled.

So -- and then our recommendation is for the Executive Director to establish a crab trap closure in public waters for the purpose of conducting a derelict crab trap cleanup for 10 days in 2024. Closure area dates will be based on stakeholder feedback.

And I will take any questions.

JASON OSBORNE:

How do you work with volunteers or what kind of volunteers are you looking for? Do you provide boats for them to go out or -JASON SAUCIER:

So we don't provide boats. Typically, it's -- anybody from the public is welcome to join us. We do solicit groups to join us. We send it out to Mississippi Master Naturalist Group.

Coastal Cleanup, their listserv volunteers. We'll send it to them. We don't have designated vessels

to get them out on the water. We just don't have the staff and the resources to do that over the whole Coastal area. But it can be fishermen. It can be members of the general public. What we typically see is they'll bring their own vessel and go out or they'll do work just on the mainland shoreline.

### JASON OSBORNE:

Because I know that -- well, at least my son, St. Stanislaus and their marine science department, have you thought about reaching out to some of those schools that maybe have some programs like that and then maybe they can get community service hours?

#### JASON SAUCIER:

I think that would be a great idea. I don't know that we've done -- directed solicitation of the schools, but we can certainly look into that, particularly marine biology programs.

#### JASON OSBORNE:

Because I know they're all -- all those kids are searching for those hours. If they got -- got to go out on a boat -- now they would have to find a boat.

#### JASON SAUCIER:

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Yeah. So we will set up a way for volunteers to register ahead of time and that's part of the post cards that we'll send out. the fishermen want to register, we'll get e-mail and a phone number from them. But we can certainly, at those dropoff locations, come up with a way if we need to sign off on service hours, community service hours, we will get that approved through the school ahead of time. So if there is an interest from a group to do that, certainly, I think we can accommodate that.

## JASON OSBORNE:

If you send me an e-mail and then I can forward it on to St. Stanislaus and maybe she might be able to connect in the girls' school there.

## JASON SAUCIER:

Yeah. Once we set those dates, Uh-huh. we'll produce a flyer for volunteers that we will put out on Facebook and I can put that in the e-mail, too, and we can figure out who to contact at each of the other schools, local schools. JASON OSBORNE:

Perfect.

# 1 CAM ROBERDS: That's a great idea. Mine are searching 2 3 for those hours as well, so keep me in the loop on I can shoot it to my kid's school as well. 4 5 JASON SAUCIER: 6 Okay. Yeah. That will hopefully, you 7 know, boost our participation in general, which we're always looking to do, for volunteers, 8 9 increase those numbers. 10 CAM ROBERDS: 11 Any questions? 12 (No response.) 13 CAM ROBERDS: 14 Thank you, sir. Appreciate it. 15 JASON OSBORNE: 16 Do we need to vote on it or no? 17 CAM ROBERDS: 18 Yeah. Is that a -- do we need to make a 19 motion to vote on it? 20 SANDY CHESNUT: 21 You can. It sounds like everyone is in 22 favor of it, so we can make a motion to go along 23 with staff's recommendation. 24 CAM ROBERDS: 25 Do I have a motion to go along with the

```
1
      staff's recommendation?
 2
      JONATHAN MCLENDON:
 3
                 I will make a motion.
 4
      JASON OSBORNE:
 5
                 Second.
 6
      CAM ROBERDS:
 7
                 All those in favor?
 8
                 Aye.
 9
      JONATHAN MCLENDON:
10
                 Aye.
11
      JASON OSBORNE:
12
                 Aye.
13
      CAM ROBERDS:
14
                 All right. Trevor, what you got for us,
15
      brother?
16
      TREVOR MONCRIEF:
17
                 We have got a good one today.
18
      CAM ROBERDS:
                 All right.
19
20
      TREVOR MONCRIEF:
21
                 And I hate that we had to do it on a
      holiday, but we'll see what happens here.
22
23
                 All right. So as y'all are all aware,
24
      that we've talked about for a long time, we have
25
      had some problems on recreational landings on the
```

MRIP side of things, so this proposal today is the first in a chain of changes that we're trying to make in order to right this ship a little bit.

So we're attempting to establish an offshore landing permit. For those of you that know and for those members of the public that aren't aware, currently the recreational landings are derived using MRIP FES. It's essentially address-based and divides effort into licensed and unlicensed, matched and unmatched frames that are combined to be able to get an overall harvest estimate.

It's got multiple limitations, so the first one is it's only as good as the data inputs that go into it, so, you know, the licensing database, the address database is matching everyone moving across to different places, when they're renting. Everything else like that is all factored with this one, and it's inflexible to change.

So essentially, the biggest problem we have here is that we have stratification of effort is basically based on what our staff sees at the dock. So if we get four offshore trips out of 10 trips that we observe, 40 percent of the effort

goes to the offshore groups and it's multiplied by the entire license frame and all the M1s that are unmatched which leads to these overinflated estimates, so we're trying to fix that with this program here.

Management need, as y'all are aware, removals are one of the most important variables in understanding our regulatory effectiveness when we make changes, our anglers' success and trends in our fisheries overtime when it comes to angler success and recreational harvest estimates scale productivity in assessments.

So the quotas that you see, the ACLs that are placed on federal fisheries, the biomass estimates for spotted seatrout when they come out, the recreational removals are what scales all of that, so basically the stock is directly correlated to the amount of removals it can take, so we see a lot of fluctuation when it comes to FES.

The primary goal today, we want to create a universe of offshore anglers to aid in the estimation of effort and harvest of offshore and federally-managed species that are pertinent to Mississippi, so this isn't just red snapper.

This is the bulk of the federal species that are being landed that we observe, greater amberjack, gray triggerfish, cobia, all those things that exist in that offshore realm that we really don't have a good handle on at the moment.

And there's currently states that are employing similar efforts to this. As y'all are aware, Louisiana already has an offshore landing permit. Florida has SRFS, and Alabama recently put in the reef fish designation. And Alabama, our state and Louisiana are trying to move in —basically in lockstep in this and all do it the same way, to the best of our ability, to create a more regional approach to the whole thing.

So this isn't just a permit to be a permit. We just don't want it to exist. Right? It's for direct use, so we want to implement essentially a pilot of the recreational survey that exists in Louisiana of LA Creel and call it MS Creel.

Those effort estimates are derived from call-outs and e-mails directly to the license frame, so it's not random address based. It's not the entire population that's been designated. You're calling the license frame, getting the

effort estimates, and then you're adding in a proportion of non-compliance to basically increase the volume of the estimate to where you think it should be and it's not being derived separately.

This pilot is planned to begin in January 2024. We've been working hard. We went and visited with LDWF staff, went over the program, us, Alabama, Gulf States. We have contracted the same company that Louisiana currently uses to be able to implement this thing, just trying to move along the best way we can.

And really, it's for the scheduling of implementation as early as 2025. We really want to move forward. It's a big burden to take on, but we're just trying to get this thing forward because we've been stuck in this place for well on a decade and we're trying to get to a solution.

Some important next steps when it comes to this is stakeholder engagement and awareness, so essentially making them aware of the program, aware of the license and how the program is going to move forward and why it's better than what we're currently doing.

Planned comparisons and analyses, so comparing our estimates that are derived directly,

to MRIP, determine any differences, where those differences lie and how we might be able to adjust what's been observed to be able to get this last one, which is transition the entire recreation time series for all species. So not just going in and applying some base proportional change to the entire time series back to 1980, actually going through, doing our due diligence and checking every single annual estimate for every species and where one stands out and doesn't make sense, taking an average across the board and really rectifying the entire time series, which is an effort that has not been taken in all the calibrations that have been happening with MRIP.

So I'm going to read the language, and it's a long paragraph. Just bear with me. I'm going to read it all into the record. So this is going to be in Title 22, Part 9, Chapter 8, Recreational Reporting Requirements. This is the same place where Tails and Scales reporting requirements are housed.

Rule 8.4, Recreational Offshore Landing
Permit: Any person, except those persons
currently exempt from purchasing a recreational
fishing license, processing any one of the below

fish species or species groups on board a vessel taken from within or outside of Mississippi territorial waters shall be required to have obtained and have in their immediate possession a recreational offshore landing permit. Any person on a trip aboard a charter vessel, who pays a fee for that trip, is not required to have this permit, but the permit is required for the owner of the licensed charter vessel.

Permits may be obtained at no cost from the Department, or authorized method, by persons who hold any valid license authorizing the taking and possessing of saltwater species of fish.

Permit shall be valid for the duration of the calendar year in which they were purchased, regardless of the duration of the valid recreational fishing license.

Required species are as listed. Reef fish species: Any species of snapper, excluding mangrove snapper, harvested within a line formed by the Intercoastal Waterway, any species of amberjack, any species of grouper or hind, gray triggerfish and for Coastal pelagics, just cobia.

Two things to note in this language, the first one, calendar year from which they are

purchased. So that offshore permit terminates on December 31st so we have an annual running of the amount of participants that are in the offshore fisheries. It's mainly for ease, simplicity, keeps everything straightforward where we're not overlapping or anything else like that and have to figure out cutoff dates.

The second one, that mangrove snapper requirement, the reason that one is in there is because we have a substantial fishery for mangroves inside the Intercoastal Waterways, especially in Jackson County. And if we required this for every snapper species that include a mangrove, then we'd have a lot of shore fishermen, small boat fishermen and everybody else that has those licenses and just increase the burden across the board and we kind of negate the attempt of what we're trying to move forward with here.

I guess -- so the last thing is just a notice to move forward, but I will save that and answer any questions that y'all might have on this and take any public comment if there is any.

JASON OSBORNE:

Is there a fine associated with not having the permit?

#### TREVOR MONCRIEF:

So we have had meetings with Marine Patrol on this, and we're going to approach it the same way we did with Tails and Scales. Right? The goal of this is to provide an overall benefit to our fishermen and a benefit to the fleet overall.

Now, there is a balance to be had on its effectiveness in terms of compliance and everything else, but the first year is mainly informational, you know, basically warn them, let them know the program, let them know why it exists.

The next year, you step into a smaller scale fine or anything like that, and then the third year, kind of like how we did with Tails and Scales, that's when it began some more rigorous implementation of, you know, we have informed, we have made y'all aware, we have introduced the program, now it's going to be more strictly enforced to be able to get that compliance estimate more exact and up as high as we can. CAM ROBERDS:

Will this be something that will be available when we go online and purchase a fishing license, just have like another option that will make it simple?

#### TREVOR MONCRIEF:

So no, but I have a reason for it.

Similar approaches were taken by Florida, right,
and there is little bit of a divergence here. You
can either have a permit and charge for it and
that negates, you know, oversubscription that you
may have, in which folks, you know, see a monetary
fee and won't do it.

If you line it up right behind the license, it's no different than the HIP permit for folks who are going hunting. Right? You get your license. You have got a check box. You check it, which means every single person that may have the possibility of even thinking about going out and catching a reef fish or cobia in a given year is going to click that box and likely leads to oversubscription, overinflation of that offshore universe.

The goal here is to not charge any fee and have it housed in a different area than our license, essentially on our website where they go to us. They call our staff if they have problems, everything else like that. They're in direct

1	contact with the department, and that's how they
2	get it.
3	And that's how Louisiana has conducted
4	it, and it seems to do well with the
5	oversubscription problem.
6	CAM ROBERDS:
7	So the oversubscription, I get it, so
8	you're making every effort to make sure it's a
9	realistic number?
10	TREVOR MONCRIEF:
11	Yeah, while not trying to burden the
12	anglers too much on it.
13	CAM ROBERDS:
14	Right. And that's the way I'm
15	seeing, so for like a recreational guy, it's
16	just regardless of the species, it's one permit
17	for me for the year. Right? I mean, it covers
18	the entire group of reef fish?
19	TREVOR MONCRIEF:
20	Uh-huh.
21	CAM ROBERDS:
22	Okay.
23	TREVOR MONCRIEF:
24	And really, what it does is it
25	constrains that effort. And folks with more, you

know, avidity, more avid anglers, it kind of constrains that effort to that universe alone and doesn't expand it across the entire license universe. It really keeps it to that group where it should be. And Louisiana has had a lot of success.

### JOE SPRAGGINS:

One of the things, too, first off, we're not paying for this MS Creel. That's being paid for by the federal government. They have a grant that they're giving us, so it's also something that they're looking for. NMFS is looking for it. They really want us to do it. Andy Strelcheck is all on board with it to help us to do this. We all think that this would be a great way.

Alabama is doing the same thing.

Alabama is falling in line with this, so it will be Alabama, Mississippi and Louisiana doing this model that we're talking about.

Our goal is to do that model for one year, and that's next year, starting January and do it, you know, all the way through the year. And once we do that, then we're going to try to push for implementation of that to be able to start in 2025. And that's the best possible --

that we could possibly do, but it's a good chance 1 that we could get some of it worked out and at 2 3 least get it done, because we've got three or four 4 months, you know, when 2025 starts before we have 5 to really start reef fishing with -- especially 6 the snapper. And so hopefully it will change our 7 allocation to what we're looking at for snapper. 8 And I think this is the best way that we 9 can do it to work with NOAA and to be able to say 10 they're going to use their MRIP and then we're 11 going to use this. It's worked great for 12 Louisiana. If you see right now, they're at four 13 fish a day and still can't catch them all. 14 CAM ROBERDS: 15 And they're actually -- Louisiana is 16 using this, so NOAA is accepting this? 17 JOE SPRAGGINS: 18 Right. Right. 19 CAM ROBERDS: 20 Perfect. 21 TREVOR MONCRIEF: 22 Yep. 23 JOE SPRAGGINS: 24 And NOAA accepted one-year data with 25 them.

#### TREVOR MONCRIEF:

2 Yes.

#### JOE SPRAGGINS:

So that's how we're saying one-year data, rather than three or four years' data. So we've got the precedence on a lot of things, and they're willing to work with us.

The other thing is if you're over 65, saltwater, you still have to have a permit. All right? Now, you know, if you are over 65 and --wildlife management, you don't have to have anything. You don't even have to have a license. And as far as saltwater, you have to have a one-time license, which costs, what, \$8 and something like that, but that license is good for a lifetime.

But you still have to update this permit every year, and the reason for that is why -- just what Trevor said. We have got to use -- because we go a year -- year-to-year calendar year when we look at this and we start managing it across the Coast. And so other states do the same thing, so that way we will be in line and so what we catch from January to the end of December that year will be in that allocation and that's what we'll work

off of.

And I know it's a little bit extra for people to do, but I think it can really work out for us overall, and the State of Mississippi will come out a lot better with it. And I appreciate Trevor and that team and all working hard on all of this.

#### CAM ROBERDS:

Appreciate it, guys. Y'all have any other questions?

#### JONATHAN MCLENDON:

Yeah. And you feel, Trevor, that this gives us closer to the data that's going to tie up to your Tails and Scales data?

#### TREVOR MONCRIEF:

Yes. So that's kind of the direction we see it going. I think the Director made a good point. Right? This isn't us straying away or, you know, completely going in our own direction, but it is allowing us to get more into the driver's seat and work with the states that are beside us to come up with a program that seems to be successful and deliver timely estimates like it does in Louisiana. So yeah, I would think that when we get the results back from here, it should

tie in pretty well to what we're observing in Tails and Scales.

#### JONATHAN MCLENDON:

And I think for like the recreational guys, like from their data perspective, like if we sit around and do nothing while these other states continue to tighten up their data, then our snapper allocation is going to continue to be reduced.

## TREVOR MONCRIEF:

Right. If we don't take the efforts to really rectify that time series and find some, you know, common ground between what is being conducted on the federal side and what we're doing, at the end of the day, it's not really going to make much of a difference because those time series are always going to be calibrated to the common currency, which is MRIP.

So at the end of the day, our hope is that we're going to find additional evidence outside of Tails and Scales that will allow us to actually go back and look at that time series on the recreational side and fix it where we can.

That's not year-to-year changes all the time.

It's not, you know -- to me, it's not that much of

1 a monumental effort. Right? 2 Us, as fisheries managers, you know, 3 fishermen, you can look at the time series and know when you have got a blip that's out of place. 4 5 You know it's not reasonable. Right? Sheepshead estimate of 800,000 pounds in 2014 or whatever it 6 7 was, it's just -- those stick out to fisheries 8 managers. And I think taking the opportunity to 9 kind of smooth those things over will go a long 10 way to not only federal management but also our 11 state side as well. 12 CAM ROBERDS: 13 I think everybody is pumped to see what 14 this -- what the outcome is because I feel 15 like it's -- you know, you guys are getting us to a realistic mark there that NOAA will accept and, 16 17 I mean, that's going to be great, so I appreciate 18 it. Thanks, Trevor. 19 Any other questions? 20 (No response.) 21 CAM ROBERDS: 22 So I guess we need a motion to recommend

So I guess we need a motion to recommend the intent for the offshore landing permit. Do we have a motion?

JONATHAN MCLENDON:

23

24

25

```
I will make it.
 1
 2
      JASON OSBORNE:
 3
                 I'll second it.
 4
      CAM ROBERDS:
 5
                 All those in favor?
 6
                 Aye.
 7
      JONATHAN MCLENDON:
 8
                 Aye.
 9
      JASON OSBORNE:
10
                 Aye.
11
      CAM ROBERDS:
12
                 Opposed?
                 (None opposed.)
13
14
      CAM ROBERDS:
15
                 Thank you, Trevor.
16
      TREVOR MONCRIEF:
17
                 You got me for one more.
18
      CAM ROBERDS:
                 Oh, you have got another one? Okay.
19
20
      There you go.
21
      TREVOR MONCRIEF:
22
                 State fishing records, so it won't be
23
      nearly as bad as what we just went through.
24
                 All right. So we've got conventional
25
      tackle records. First, it's a Florida Pompano.
```

```
1
      Old record was four pounds, 15.8 ounces.
                                                  This new
      record is five pounds, .64 ounces. The angler is
 2
 3
      Stefanson Smith. There is a picture of the fish.
      There is a picture of Mr. Smith with that fish.
 4
 5
                Next one is one we haven't seen. It's
      an Irish Pompano. It's a new record, 5.9 ounces,
 6
 7
      Cecily O'Brien. Here's a picture of that fish,
 8
      and there's a picture of Ms. Cecily with that
 9
      fish.
10
                 So all we need is a motion to adopt
11
      those new state records.
12
      JASON OSBORNE:
13
                 So moved.
14
      CAM ROBERDS:
15
                WOW.
16
      TREVOR MONCRIEF:
17
                That's a peculiar one.
18
      CAM ROBERDS:
                Yeah, that's something else there.
19
20
                Do we have a motion?
21
      JASON OSBORNE:
22
                Motion.
23
      CAM ROBERDS:
24
                 I will second.
25
                All those in favor?
```

1	JONATHAN MCLENDON:
2	Aye.
3	JASON OSBORNE:
4	Aye.
5	CAM ROBERDS:
6	Aye.
7	Thank you, Trevor.
8	All right. Ayesha Gray.
9	AYESHA GRAY:
10	Hi. Good morning, Commissioners,
11	Director.
12	I'm here to invite y'all to the annual
13	Star Party at the Grand Bay National Estuarine
14	Research Reserve, the Grand Bay NERR. This is
15	we do this every year. This is our open house,
16	and we have all kind of family fun that goes on at
17	the NERR on this evening. It's on December 9th,
18	and there is hayrides. There is stargazing. It's
19	set up at the time of the Geminid meteor shower,
20	and so we take folks out on a hayride to the end
21	of the road at Bayou Heron so they can check out
22	the stars. We have some experts in stargazing and
23	telescopes out there.
24	We also have lots of crafts. We take
25	owl walks out the back. A lot of times we have

called up screech owls and had them actually fly over the crowd, and so that's really nice. We do cookies, soup and Santa pictures. So a lot of fun goes on there, and we want to make sure that everyone knows that we're doing that coming up.

And one of the things I also wanted to share is just some of the fun pictures over the years that we have gotten at this Star Party. And so it's really rewarding for me and for our staff to realize that we have lots of families that make this Star Party their family tradition, and we have seen lots of kids and families grow up on our couch at the Star Party.

And so these are just some examples of some of the kids that have grown up on our couch. And so it's a lot of fun to have these families come year after year to hang out with us and to enjoy this event, and that includes some of our families that are there at the -- NERR employees as well. And this doesn't even show everyone. I have tons and ton of pictures like this.

So we would like to invite you on December 9th. It's from 5:00 to 9:00 p.m. It's an open house. No registration or anything. Just come on over and enjoy the evening with us.

# 1 JASON OSBORNE: 2 Is that Director Spraggins as the Santa 3 or is that --4 AYESHA GRAY: 5 Actually, Director Spraggins, we are 6 looking for a Santa. 7 JOE SPRAGGINS: 8 You know, I think Patrick looks like a 9 good one. 10 AYESHA GRAY: 11 So yeah, if anybody would like to be 12 Santa this year, please get in contact with me. 13 All right. 14 CAM ROBERDS: 15 We appreciate it. There is a lot of smiles going on in those pictures for sure, so 16 17 lots of good times. 18 AYESHA GRAY: 19 It's a lot of fun. It's really 20 nice to see people really include that in their 21 family tradition. And it's something I talk a lot 22 about as one of the things that the NERR, we --23 you know, our aim is to work on what we do in 24 terms of research and education and service to our 25 community, but we want to be a place that people

really value and they come to and we see that
happening with this party.

JOE SPRAGGINS:

You know, the more I look at it, Trevor

TREVOR MONCRIEF:

has got the beard.

Nope. Nope. I'm Kris Kringle.

JOE SPRAGGINS:

All right. Also, you know, thank you, Dr. Gray for coming out here today. And, you know, we don't get enough information with her. She does a lot over there, I mean, a huge amount of work over there day after day. And we're lucky to have Dr. Gray and her team, and we're also lucky to have a NERR in our state because there is not one everywhere and this is something that we're able to use. And it's funded. It's funded at 70 percent by the federal government and we fund it 30 percent out of Tidelands, so it's a great deal for us to be able to have that.

If you ever get a chance, stop by and see it. I mean, you know, there is numerous things that they do every year and this is just one of them, but there is numerous events that happens year round over there. And if you ever

```
1
      just want to just take a chance as a commissioner
      and go look at it, just let Dr. Gray know. She'd
 2
      be glad to show you the whole area, and it's a
 3
 4
      thing that, I think, you would be impressed with
 5
      what you see. And we appreciate it.
      AYESHA GRAY:
 6
 7
                Absolutely.
 8
      JONATHAN MCLENDON:
 9
                Thank you.
10
      AYESHA GRAY:
11
                Yep. You're welcome.
12
      CAM ROBERDS:
13
                We're down to other business.
14
      anybody have any other business to mention?
15
                If not, then do we have any public
16
      comments?
17
      JOE SPRAGGINS:
18
                I saw none.
19
      CAM ROBERDS:
                No public comments.
20
                Well, we appreciate everybody for coming
21
22
            I hope everybody has a very nice
23
      Thanksgiving with family, and I guess I will make
      the motion to close the commissioner meeting.
24
25
      JONATHAN MCLENDON:
```

```
1
                 Second.
 2
       JASON OSBORNE:
 3
                 Second.
 4
       CAM ROBERDS:
 5
                 All those in favor?
 6
                 Aye.
